Non-financial: No relevant relationships to disclose.
Common Sense Approach to Outcome Measures

• What is an patient-reported outcome measure?
• Why do they matter more than ever?
• The science behind PROMs
• Clinical implementation
Outcomes Defined

• Your intervention (hearing aids, aural rehab, etc.) made a difference in communicating, daily living and long-term health.

• Require a pre intervention and post intervention measure.
Current Situation

• 20% of providers routinely conduct any self-reported outcome measure

• Computer-based OMS collect and analyze dozens of business metrics, but no self-reports of outcome
Capture Downstream Outcomes

- Hearing Loss
- Changes in Brain Structure & Function
- Reduced Social Engagement
- Cognitive Load
- Common Etiology (e.g., aging, microvascular disease)

- Impaired Cognitive Functioning
- Poorer Physical Functioning
- Poorer QoL & Health Economic Outcomes

Lin 2014
Hearing Loss

Cognitive Load

Changes in Brain Structure & Function

Reduced Social Engagement

Impaired Cognitive Functioning

Poorer Physical Functioning

Poorer QoL & Health Economic Outcomes

Common Etiology
(e.g., aging, microvascular disease)

HEARING LOSS ACCELERATES
Why Outcomes Matter More than Ever

1. Healthcare Economics
2. Patients want to know
3. Point of differentiation (Data-driven, word-of-mouth advertising)
Healthcare Economics

**Figure 1. Cumulative Distribution of Personal Health Care Spending, 2009**

- Top 1% of spenders account for >20% of spending ($275 billion)
- Top 5% of spenders account for almost half of spending ($623 billion)

NIHCM Foundation analysis of data from the 2009 Medical Expenditure Panel Survey.
Interventional Audiology

• 5% of population accounts for 50% of the spending
• This group is mainly the elderly with several co-morbidities
• Most in this population has some degree of hearing loss
• Demonstrate to primary care that audiology plays a role in cost containment
• Document that our treatments are effective
Goal of Outcome Measures

• Demonstrate to the patient, family, referring physician and others that your treatment plan is effective.

• Reduce hearing handicap
• Improve daily communication & quality of life
• Promote a more active lifestyle
• Promote better overall general health

Hearing Handicap Inventory for the Elderly Screening Version (HHIE-S)

**Instructions:** Please check “yes,” “no,” or “sometimes” in response to each of the following items. Do not skip a question if you avoid a situation because of a hearing problem. If you use a hearing aid, please answer the way you hear without the aid.

<table>
<thead>
<tr>
<th>Item</th>
<th>Yes (4 pts)</th>
<th>Sometimes (2 pts)</th>
<th>No (0 pts)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E Does a hearing problem cause you to feel embarrassed when meeting new people?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E Does a hearing problem cause you to feel frustrated when talking to members of your family?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>S Do you have difficulty hearing when someone speaks in a whisper?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E Do you feel handicapped by a hearing problem?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>S Does a hearing problem cause you difficulty when visiting friends, relatives, or neighbors?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>S Does a hearing problem cause you to attend religious services less often than you would like?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E Does a hearing problem cause you to have arguments with family members?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>S Does a hearing problem cause you difficulty when listening to TV or radio?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>E Do you feel that any difficulty with your hearing limits or hampers your personal or social life?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>S Does a hearing problem cause you difficulty when in a restaurant with relatives or friends?</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**TOTAL SCORE = _______** (sum of the points assigned to each of the items)

E = Emotional; S = Social

**Interpretation of score:**
0-8 suggests no hearing handicap
10-24 suggests mild-moderate hearing handicap
26-40 suggests significant hearing handicap

Refer for additional hearing evaluation if score is ≥ 10 points
HHIE Scoring

• 0-8 denotes no self-perceived handicap.
• 10-22 denotes mild to moderate handicap.
• 24-40 denotes significant handicap.
HEARING HANDICAP INVENTORY (A&E Versions)

Name/ID: ________________________________ Age: _______ ☐ Pre-Fit ☐ Post-Fit

INSTRUCTIONS: The purpose of this questionnaire is to identify the problems your hearing loss may be causing you. Circle Yes, Sometimes, or No, for each question. DO NOT SKIP A QUESTION IF YOU AVOID A SITUATION BECAUSE OF A HEARING PROBLEM. If you currently use hearing aids, please answer as to how you do WITH your hearing aids.

E-1 Does your hearing problem cause you to feel embarrassed when meeting new people?      Yes Sometimes No

E-2 Does a hearing problem cause you to feel frustrated when talking to members of your family?      Yes Sometimes No

S-3 Does a hearing problem cause you difficulty understanding co-workers, clients, or customers?      Yes Sometimes No

E-4 Do you feel handicapped by a hearing problem?   Yes Sometimes No

S-5 Does a hearing problem cause you difficulty when visiting friends, relatives, or neighbors?      Yes Sometimes No

S-6 Does a hearing problem cause you difficulty in the movie or theater?         Yes Sometimes No

S-7 Does a hearing problem cause you to have arguments with family members?      Yes Sometimes No

S-8 Does a hearing problem cause you difficulty when listening to the TV or radio?        Yes Sometimes No

E-9 Do you feel that any difficulty with your hearing limits or hampers your personal or social life?     Yes Sometimes No

S-10 Does a hearing problem cause you difficulty when in a restaurant with relatives or friends?    Yes Sometimes No

S-11 Does a hearing problem cause you difficulty when attending religious services less often than you would like? Yes Sometimes No

S-12 Do you have difficulty hearing when someone speaks in a whisper? Yes Sometimes No

</table>
INTERNATIONAL OUTCOME INVENTORY – HEARING AIDS (IOI-HA)

1. Think about how much you used your present hearing aid(s) over the past two weeks. On an average day, how many hours did you use the hearing aid(s)?

<table>
<thead>
<tr>
<th>None</th>
<th>Less than 1 hours a day</th>
<th>1 to 4 hours a day</th>
<th>4 to 8 hours a day</th>
<th>More than 8 hours a day</th>
</tr>
</thead>
</table>

2. Think about the situation where you most wanted to hear better, before you got your present hearing aid(s). Over the past two weeks, how much has the hearing aid helped in that situation?

<table>
<thead>
<tr>
<th>Helped not at all</th>
<th>Helped slightly</th>
<th>Helped moderately</th>
<th>Helped quite a lot</th>
<th>Helped very much</th>
</tr>
</thead>
</table>

3. Think again about the situation where you most wanted to hear better. When you use your present hearing aid(s), how much difficulty do you STILL have in that situation?

<table>
<thead>
<tr>
<th>Very much difficulty</th>
<th>Quite a lot of difficulty</th>
<th>Moderate difficulty</th>
<th>Slight difficulty</th>
<th>No difficulty</th>
</tr>
</thead>
</table>

4. Considering everything, do you think your present hearing aid(s) is worth the trouble?

<table>
<thead>
<tr>
<th>Not at all worth it</th>
<th>Slightly worth it</th>
<th>Moderately worth it</th>
<th>Quite a lot worth it</th>
<th>Very much worth it</th>
</tr>
</thead>
</table>

5. Over the past two weeks, with your present hearing aid(s), how much have your hearing difficulties affected the things you can do?

<table>
<thead>
<tr>
<th>Affected very much</th>
<th>Affected quite a lot</th>
<th>Affected moderately</th>
<th>Affected slightly</th>
<th>Affected not at all</th>
</tr>
</thead>
</table>

6. Over the past two weeks, with your present hearing aid(s), how much do you think other people were bothered by your hearing difficulties?

<table>
<thead>
<tr>
<th>Bothered very much</th>
<th>Bothered quite a lot</th>
<th>Bothered moderately</th>
<th>Bothered slightly</th>
<th>Bothered not at all</th>
</tr>
</thead>
</table>

7. Considering everything, how much has your present hearing aid(s) changed your enjoyment of life?

<table>
<thead>
<tr>
<th>Worse</th>
<th>No change</th>
<th>Slightly better</th>
<th>Quite a lot better</th>
<th>Very much better</th>
</tr>
</thead>
</table>

<td>15-D Questionnaire</td>
</tr>
</tbody>
</table>
15-D Questionnaire

• Self-report of quality of life, along 15 dimensions
• Provides “population baseline” score for adults
• [http://www.15d-instrument.net/15d](http://www.15d-instrument.net/15d)
- Niemensivu, et al IJA 2015
- 949 adults fitted with unilateral hearing aid compared to control group with normal hearing
- group with hearing loss had lower scores (pre-fitting)
- 6 month post AR: mean improvement was marginal
QUESTION 1. MOBILITY
1 ( ) I am able to walk normally (without difficulty) indoors, outdoors and on stairs.
2 ( ) I am able to walk without difficulty indoors, but outdoors and/or on stairs I have slight difficulties.
3 ( ) I am able to walk without help indoors (with or without an appliance), but outdoors and/or on stairs only with considerable difficulty or with help from others.
4 ( ) I am able to walk indoors only with help from others.
5 ( ) I am completely bed-ridden and unable to move about.

QUESTION 2. VISION
1 ( ) I see normally, i.e. I can read newspapers and TV text without difficulty (with or without glasses).
2 ( ) I can read papers and/or TV text with slight difficulty (with or without glasses).
3 ( ) I can read papers and/or TV text with considerable difficulty (with or without glasses).
4 ( ) I cannot read papers or TV text either with glasses or without, but I can see enough to walk about without guidance.
5 ( ) I cannot see enough to walk about without a guide, i.e. I am almost or completely blind.

QUESTION 3. HEARING
1 ( ) I can hear normally, i.e. normal speech (with or without a hearing aid).
2 ( ) I hear normal speech with a little difficulty.
3 ( ) I hear normal speech with considerable difficulty; in conversation I need voices to be louder than normal.
4 ( ) I hear even loud voices poorly; I am almost deaf.
5 ( ) I am completely deaf.
QUESTION 9. USUAL ACTIVITIES
1 ( ) I am able to perform my usual activities (e.g. employment, studying, housework, free-time activities) without difficulty.
2 ( ) I am able to perform my usual activities slightly less effectively or with minor difficulty.
3 ( ) I am able to perform my usual activities much less effectively, with considerable difficulty, or not completely.
4 ( ) I can only manage a small proportion of my previously usual activities.
5 ( ) I am unable to manage any of my previously usual activities.

QUESTION 10. MENTAL FUNCTION
1 ( ) I am able to think clearly and logically, and my memory functions well
2 ( ) I have slight difficulties in thinking clearly and logically, or my memory sometimes fails me.
3 ( ) I have marked difficulties in thinking clearly and logically, or my memory is somewhat impaired.
4 ( ) I have great difficulties in thinking clearly and logically, or my memory is seriously impaired.
5 ( ) I am permanently confused and disoriented in place and time.
QUESTION 12. DEPRESSION
1 ( ) I do not feel at all sad, melancholic or depressed.
2 ( ) I feel slightly sad, melancholic or depressed.
3 ( ) I feel moderately sad, melancholic or depressed.
4 ( ) I feel very sad, melancholic or depressed.
5 ( ) I feel extremely sad, melancholic or depressed.

QUESTION 13. DISTRESS
1 ( ) I do not feel at all anxious, stressed or nervous.
2 ( ) I feel slightly anxious, stressed or nervous.
3 ( ) I feel moderately anxious, stressed or nervous.
4 ( ) I feel very anxious, stressed or nervous.
5 ( ) I feel extremely anxious, stressed or nervous.

QUESTION 14. VITALITY
1 ( ) I feel healthy and energetic.
2 ( ) I feel slightly weary, tired or feeble.
3 ( ) I feel moderately weary, tired or feeble.
4 ( ) I feel very weary, tired or feeble, almost exhausted.
5 ( ) I feel extremely weary, tired or feeble, totally exhausted.
DeJung Gierveld Loneliness Scale - Short Version

1. I experience a general sense of emptiness
2. There are plenty of people I can rely on when I have problems
3. There are many people I can trust completely
4. I miss having people around
5. There are enough people I feel close to
6. I often feel rejected
DeJung Gierveld Loneliness Scale  - Short Version

“I miss having people around”

5-point Scale:

No!  No  More or Less  Yes  Yes!  No Response
DeJung Gierveld Loneliness Scale - Short Version

“I miss having people around”

5-point Scale:

No! No More or Less Yes Yes! No Response
Self-reported health

How would you rate your health, compared to others your age?”

Much worse    Worse    Same    Better    Much Better
Patient Health Questionnaire 2 (PHQ-2)

- 2-question screener for depression
- 0 to 6 scale
- Score of 3 or higher – additional screening/evaluation encouraged
The Patient Health Questionnaire-2 (PHQ-2)

<table>
<thead>
<tr>

</table>
Screening for Cognitive Disorders

- 6-CIT
6-CIT

1. What year is it?
2. What month is it?
Ask the patient to repeat the following name and address: Arthur Jones, 42 High Street, Detroit
3. About what time is it?
4. Count backwards from 20
5. Say the months of the year in reverse order
6. Repeat the name and address discusses earlier
6-CIT scoring

• 0-7 normal
• 8-9 mild cognitive impairment
• 10-28 significant cognitive impairment
• Computerized version available
• Integrate in current speech audiometry assessment
Next Steps

• Choose 1-2 proximal measures of outcome
• Screen for downstream consequences (simple scaling questions)
• Have a solid referral network in place (depression, cognitive disorders)
• Ask your computer-based OMS to include your metrics
• Use aggregate scores to manage your staff and to market practice
Dr. Weinstein and PROMs
POSITIVE DEVIANCE – APPROACH TO IMPROVING QUALITY OF HEARING HEALTH CARE

• Break free from the constraints and norms of our profession
• Identifying practices or professions achieving desirable outcomes (positive deviance) promote and adopt the behaviors that explain the improved outcome
• Strength-based approach to change - best experts to solve our challenges
• Identify and optimize existing, sustainable solutions from within our profession to assist with innovation
• Easier to change behavior by practicing it
STEPS (Bradley, et al., 2009)

1. Identify positive deviants – high performance
2. Use qualitative methods to study practices and propose hypotheses – define acceptable performance measures
3. Test hypothesis-mixed methods approach to influence performance
4. Work with key stakeholders to disseminate evidence
5. Patient level data and organization level data
Realities of Age Related Hearing Loss (ARHL)

- Undetected but Prevalent
- Underestimated
- Neglected and untreated: 10 - 30%
- Risk factor for morbidity and mortality
- Increases caregiver burden
- Hearing care solutions improve quality of life
- Fatiguing to communicate among those who seek help for their and for those reporting psychosocial hearing difficulties
• The most pronounced effects of hearing loss are psychological, not the more readily evident communicative gaps or “mishearings” experienced in everyday interactions
REGULATORY REALITIES OF AGING-VALUE BASED PAYMENT MODELS

• Secretary of HHS Moving Toward Incentive Value Based Payment Model
  • Policy makers intent on measuring the value of health care services and rewarding clinicians and health care entities that that improve that value
• Must demonstrate value of care to patients
3Ds – Gawande (2011)

• Data Interest
• Decide on Solutions/Audiologist using data
• Disseminate Information
VALUE BASED CARE – PATIENTS NEED DATA TO MAKE DECISIONS (Accountable)

• QUALITY
• COST
• TIME
Data (Jette, 2015)

- Measure in Real Time the Value of the Care we Provide
  - WHAT SOLUTIONS WORK FOR TREATING HEARING LOSS AND ATTENDANT PSYCHOSOCIAL DIFFICULTIES UNDER WHAT CIRCUMSTANCES WHAT ARE THE OUTCOMES ACHIEVED AND AT WHAT COST?
  - INCORPORATE THE VIEW OF THE PATIENT IN TERMS OF IMPACT OF CONDITION ON PERSON’S LIFE
Patient-Reported Outcome

- Any report of the status of a patient’s health condition that comes directly from the patient or a caregiver or a surrogate, without interpretation of response by the clinician
- Specific, measurable, actionable, reliable, and time bound (SMART)
  - If a process or outcome cannot be measured it cannot be improved
• “... any report of the status of a patient's health condition that comes directly from the patient, without interpretation of the patient's response by a clinician or anyone else." (NQF)

• “... reports coming directly from patients about how they feel or function in relation to a health condition and its therapy...”(Cochrane)

• Universal health outcomes: “... reflect the important clinical effects of chronic conditions and their treatments...” (Tinetti et al. JAGS 2011)

• How hearing loss impacts trajectory of one’s life
PATIENT REPORTED OUTCOME MEASURES

The Road Less Traveled...
WHICH PATIENT REPORTED OUTCOME

SPEECH IN NOISE
TARGET

FATIGUE

SELF RATED HEALTH

COGNITIVE STATUS

SOCIAL/EMOTIONAL LONELINESS

Williams et al. (2002)
I do think we should perhaps discuss this here if time allows. Also, this is within the Ida Presentation- does that matter if I created it??

samantha morgan,

</table>
Immediate Outcomes
- Improved speech understanding in noise
- Improved patient-centered communication during hearing health care encounter
- Ease of listening enhanced
- Reduced self-reported hearing handicap
- Social engagement increased
- Reduced loneliness
- Social isolation reduced
- Communicating in a Patient-Centered Fashion
- Fatigue level reduced

Intermediate Outcomes
- Increased patient self-efficacy
- Improved physician-patient communication
- Lower depressive symptoms
- Improved cognitive status
- Improved self-rated health
- Reduction in falls
- Reduced caregiver burden
- Fatigue level reduced

Health Outcomes
- Improved transitions in care
- Reduced health care expenditures
- Improved quality of life and well-being
- Improved biologic outcomes
- Comorbidity reductions
- Improved ratings of health care
- Reduced repeat hospitalizations
Correlates of Psychosocial Hearing Difficulties

- Mobility Limitations
- ADL Difficulties
- Quality of Life
- Loneliness/Subjective Social Isolation
- Self rated health
- Cognitive Decline
- Fatigue
- Depression
Correlates of Hearing Impairment

- Falls
- ADL Difficulties
- Depression
- Reduced Activity Levels
- Mobility Limitations
- Cognitive Status
- Physician Patient Communication

2015 ANNUAL CONVENTION CAPITAL IDEAS
PRO Measure (PROM)

• An instrument or scale or single item measure used to assess the PRO concept as perceived by the patient, obtained by directly asking the patient to self report
• Patient reported outcome measures (PROMs) - quantify socially defined life activities
  • Inexpensive, convenient, and patient-centered
  • FDA – Outcomes conceptually grounded

• PROMs - help to demonstrate the impact of our interventions on daily life function (Beauchamp, Jette, Ward, Kurlinski, et al., 2015)
  • Bring perspective of patient, caregiver to center of care delivery and performance measurement
  • Help make the case for greater investment in hearing interventions
PROMs AT POINT OF CARE

- Facilitate shared decision making
- Monitor treatment across conditions
- Engage patients in prioritizing competing demands
- Symptom-based screening
- Potential metric for treatment decisions
- Simplify treatment approaches for both patients and clinicians
VALUE OF PROMs

• Critical to assessing whether clinicians are improving the health of patients
• Attempt to capture whether the services provided actually improve patients' health and sense of well-being

### How Well Providers (or Doctors) Communicate with Patients

The survey asked patients how often their providers explained things clearly, listened carefully, showed respect, provided easy to understand instructions, knew their medical history, and spent enough time with the patient.

<table>
<thead>

</tbody>
</table>

**Response Options**
- Never
- Sometimes
- Usually
- Always
SF 12 (Ware et al, 1996)

- PCS - self-perceived quality of physical health
- MCS – self perceived quality of mental health
- Scores range between 0 and 100 with lower scores indicating higher levels of perceived disability, respectively
Indexes of Disability In Relation to Self Care

• Activities of daily living (ADL; Katz at al, 1970)
  • Self care (DEATH)

• Instrumental activities of daily living (IADL; Lawton & Brody, 1969)
  • Independent living (shop, telephone, meds, etc.)
FROM PROM to PRO-PM

- **PRO-based Performance Measure**
  - How patient reported data are aggregated and interpreted to reflect performance
PRO-Based Performance Measure (PRO-PM)

- A performance measure that is based on PROM data aggregated for an accountable health care entity
  - Proportion of hearing aid users with depression (e.g. initial PHQ-9 score > 9 who after three or six months of hearing aid use had a PHQ-9 score of <5 at follow-up)
  - Proportion of hearing aid users with psychosocial hearing difficulties (baseline score HHI > 18 who after three or six months of hearing aid use had an HHI score <10 at follow-up)
  - Proportion of hearing aid users with improved self rated health following three to six months of hearing aid use
  - Proportion of patients rating their patient experience/encounter as favorable
DISSEMINATION – USE DATA TO IMPROVE AND PROMOTE PRACTICE

• AGGREGATE DATA – BUILD A PORTFOLIO OF EVIDENCE FOR SCALABLE IMPROVEMENTS

• POSITIVE DEVIANCE – AGGREGATE DATA POSTED ON WEBSITE FOR MARKETING PURPOSES – DISSEMINATION OF INFORMATION
  • BEST PRACTICES, PRACTICE INNOVATION

IMPROVE SELF PERCEIVED
PSYCHOSOCIAL DIFFICULTIES
Depression

• Hearing aid use - significantly associated with lower odds of major depressive disorder (MDD) and any depressive symptoms (Mener, Betz, Genther, & Lin, 2014)

• Frequent or regular use of hearing aids - associated with lower prevalence of depressive symptoms (Wang, Schneider, Burlutsky, et al., 2009)
DEPRESSION (Boi, et al., 2012)

93%-moder to severe; 7% severe
Binaural, digital
Wore units six to 12 hours/day
Normal on MMSE and on ADLs
Protective effects of HA use against cognitive decline?
COGNITIVE STATUS

- Rate of incident cognitive impairment - 11.1% for hearing-aid users versus 15.5% for non-users (11 year) (Dawes, et al., 2015)
- Hearing aid users and non users comparable on MMSE
- Not supportive of a robust effect of hearing-aid use as being protective against cognitive decline.
COGNITIVE STATUS (Amieva, 2015)

- Hearing loss (do you have hearing trouble?) (major, moderate, none)
  - Hearing impaired more co-morbidities, higher depression scores, higher level of dependencies
  - Poorer MMSE scores
- Persons with self rated hearing loss - greater cognitive decline over 25 year period
- Subjects reporting hearing loss not using hearing aids declined more rapidly on the MMSE than the hearing aid users
- Elderly adults with hearing loss using hearing aids - similar rates of cognitive decline as those with no hearing impairment
• Self rated hearing loss significantly associated with a lower score on MMSE and greater cognitive decline during 25-year follow-up period (independent of age, gender and educational level) (Amieva, 2015).
• Cognitive decline in individuals with hearing impairment was no longer significant after controlling for depression, social network size, comorbidities, dependency, IADL

• There is no direct effect of hearing loss on cognitive decline but depressive symptoms and social isolation may mediate the association.
Lin & Albert (2014)
• By partially restoring communication abilities, hearing aids may help improve mood, increase social interactions, and enable participation in cognitively stimulating abilities and consequently could slow cognitive decline
SOCIAL/EMOTIONAL LONELINESS
Loneliness

Absence of Intimate Relationships (E)

An Expression of Negative Feelings

Absence of a Broader Engaging Social Network (S)

Loneliness

EMOTIONAL ND SOCIAL LONELINESS (Peplau & Perlman, 1982)
Outcomes on DG Loneliness Scale (N=40)

- **DG total**: Mean Pre 2.6, Mean Post 1.9
- **DG social loneliness**: Mean Pre 1.3, Mean Post 1.1
- **DG emotional loneliness**: Mean Pre 1.2, Mean Post 0.8

*significant p<0.05 (two-tailed)
CHANGE IN SOCIAL/EMOTIONAL LONELINESS

![Bar chart showing change in loneliness](chart.png)

Not lonely (0-2) - PRE hearing aid fitting: 55.0%
Not lonely (0-2) - POST hearing aid fitting: 72.5%
Lonely (3-11) - PRE hearing aid fitting: 45.0%
Lonely (3-11) - POST hearing aid fitting: 27.5%

Frequency in %
Physical Functional Status

• Hearing-aid users - statistically significantly higher (better) mean SF-12 physical component score than non-users (Dawes, et al., 2015)
  • No association with mental health measures
SELF RATED PSYCHOSOCIAL HEARING DIFFICULTIES - HHI

• Hearing aids associated with reduced handicap (Dawes, et al., 2015; Thoren, et al, 2015; Chisolm, et al., 2007))

• Hearing-aid users may still experience significant levels of handicap after hearing aid use (Thoren, et al., 2015; Dawes, et al., 2015)

• E Rehab effective in reducing residual disability
INGREDIENTS FOR CLINICAL PRACTICE

- Marketing Services
- Elicit patient narrative in context of life circumstances – maximize function
- Multidimensional treatment
- Patient values guide decisions
AUDIOLOGIST DECISION AID (ADA)

PROMs - YES

PROMs - NO
