## Tips for Submitting Clean Paper Claims

Noridian uses optical character recognition (OCR) to process paper CMS-1500 claim forms. OCR is a means of inputting text into a computer. It involves scanning a paper document to create a digital image of the text and then using software to store knowledge about that digital image. With OCR, it is very important suppliers follow proper paper claim submission guidelines.

### Font and Printing

- Use Courier New font for computer-generated claims. Do not print in italics, bold or script. Do not mix fonts.
- Use Pica 10 or 12-point typeface for claims typed on a typewriter.
- Do not type in italics or script.
- Use upper case letters for all claim data.
- Ensure none of the characters touch.
- Ensure no lines from the printer cartridge are anywhere on the claim.
- Do not use special characters, (dollar signs, decimals, dashes, asterisk, or backslashes) unless otherwise specified.
- Use an ink jet or laser printer to complete the CMS-1500 claim form. Because claims submitted with dot matrix printers have breaks in the letters and numbers, OCR equipment is unable to properly read these claims. Suppliers using dot matrix printers risk slow or incorrect processing of their claims.

### Ink Color

The OCR equipment is sensitive to ink color. Follow these guidelines on ink color:

- Submit the scannable, red-ink version of the CMS-1500 claim form.
- Do not use red ink to *complete* a CMS-1500 claim form. OCR scanners "drop out" any red that is on the paper.
- Use true black ink. Do not use any other color ink such as blue, purple, or red.

The CMS-1500 form is the standard paper claim form used by providers or suppliers to bill Medicare Fee-For-Service (FFS) contractors. This interactive guide provides instruction on how to complete the form.
